- Symptoms:** This product has a very low level of toxicity. Symptoms are unlikely unless very large quantities are ingested.  
Symptoms of intoxication that may arise if the product is mishandled include: apathetic state, depressed muscular tone, respiratory disturbance and trembling. Muscular cramps are also possible in severe cases of poisoning.
- Medical attention:** Treat symptoms (nicotine-like effects) if sufficient exposure has occurred to allow them to occur. Check blood pressure and pulse rate frequently since bradycardia and hypotonia are possible. Provide supportive measures for the respiratory function and cardiac action. Give artificial respiration if signs of paralysis appear. Additional therapeutic measures involve elimination of the substance from the body or acceleration of its excretion (gastro-lavage, saline laxatives).  
Antidote: none known.  
Contraindications: Absorption promoting agents such as alcoholic beverages and milk. Oils and fats are of no special significance due to the low liposolubility of the active ingredient.
